

VibeHaus

Your vibe. Your people. Your city.

An AI-powered friendship-discovery app for expats, newcomers, and locals in Berlin.

Sakshi Gaur · AI Product Management Capstone

Making friends as an adult is hard, especially in a new city

Who, pain, and outcome.

1

Who

Expats & newcomers, 0-3 years in Berlin, plus locals seeking deeper connection

2

The pain

Not a lack of people - a lack of fit and the fear that reaching out first feels clingy

3

The outcome

Higher-quality introductions and an easier first move; real connection over time-in-app

What we learned, and where we fit

Persona, evidence, competitor position.

Nadia, 30s expat

- 0–3 yrs in Berlin, ambivert
- 1–2 real friends, many acquaintances
- Fears the first move feels clingy
- Worries a friend-app = dating app

“Depth, not access.”

Evidence: 68% of 18-39s in Germany report loneliness tied to moving

Competitive snapshot

Player	Fit	Intent	Activities
Bumble BFF	Medium	Yes	Limited
Meetup	Low	No	High
InterNations	Low	Low	High
VibeHaus	High	High	Med→High

Positioning: VibeHaus is fit-first, explains the match, and requires mutual opt-in.

Insight → decision

- Depth, not access → match on fit and personality
- First-move fear → Vibemate Request + mutual acceptance
- AI lukewarm → AI must be explained and optional
- Activities matter → Events are in the MVP

VIBEHAUS — ROADMAP & LAUNCH STRATEGY

From MVP to Monetization and Beyond

LAUNCH PROGRESSION

CROSS-CUTTING: RESPONSIBLE AI & SAFETY • ANALYTICS & LEARNING — ALL PHASES

Transparent, safe, user-first experience with continuous measurement and improvement.

MoSCoW

From the full backlog of epics, we prioritized what belongs in Now, Next, Later and Future based on the core MVP hypothesis.

One story from the demo path

Vibemate Requests are the heart of the consent model.

User Story

As a VibeHaus user who likes someone's profile, I want to send a Vibemate Request rather than start chatting immediately, so that contact only happens once both people opt in.

Why this story

It is the mechanism behind our core insight: depth, not access - and it is the path shown live in the demo.

Acceptance Criteria

- Heart/request action sends a Vibemate Request, not direct chat
- Recipient can Accept or Decline the request
- Chat unlocks only after mutual acceptance, can also send coffee or activity requests
- Decline creates no connection and no error is shown
- No contact happens before both people opt in

How it's actually built

Simple architecture, three honest layers.

1. Data

Interests, social energy, intent. No protected attributes.

2. Supervised ML

Rule-weighted model ranks compatibility.

3. LLM

Writes the match reason, interprets Mr. Vibe chips.

4. Scripted scaffolding

Greetings & guardrails are fixed text, for reliability.

VibeHaus - MVP Validation Dashboard

Are Vibe Matches helping people connect and make real-world plans?

Confirmed IRL Connection Rate

37.5%

Target >= 20%

Onboarding Activation Rate

67%

Target >= 60%

Are Signups Turning Into Connections?

Vibemate Request Rate

65.3%

Vibemate Acceptance rate

57.6%

Target >= 40%

D7 Retention

24%

D30 Retention

6%

Free-to-Paid Conversion

0.3%

Future Metric

Product insight

If users connect but few confirm an IRL plan, reduce planning friction through better prompts, Calendar nudges and clearer Coffee/Activity Vibes.

VibeHaus Metrics Dashboard

Funnel

Signup to Confirmed IRL Plan (60-day total)

"Overall: 9.4% of signups reach a confirmed IRL plan"

Guardrails, not an afterthought

Highlights from the full Responsibility Statement.

1

No protected attributes

No ethnicity collected; no matching on protected traits, ever.

2

Transparent, never a bare score

Every match shows a band and reason; no unexplained precise percentage.

3

Mutual consent, always

No contact of any kind before both people opt in.

4

Honest about limits

No fake verification; Mr. Vibe is chip-only after free-text testing was unreliable.

Where this goes next

GTM, next release and how we learn.

Go-to-market

- Expat Facebook/WhatsApp groups
- Newcomer & university networks
- Word of mouth, expat-first framing

Next release

- Live map, notifications, advanced filters
- Trust & verification, moderation
- Live-conversational Mr. Vibe (chatbot)

How we'd learn

- Weekly dashboard review
- Every wave gated by Go/No-Go
- Iterate on fit before scaling spend

Key close: prove fit, protect safety, then scale spend.

Live walkthrough

One core flow, end to end
